

SOC AI Incident Investigation Report

Generated At: 2026-09-22 21:30:32

1. Executive Summary

This report provides an automated forensic timeline of detected security anomalies. It details targeted entities, attack vectors, temporal metrics, pre-attack baseline behaviors, and automated post-attack mitigation responses executed by the AI SOC Analyst system.

2. Incident Analysis Matrix (Who, Where, When, What/How, Pre vs Post)

Who (Target User)	Where (Source IP)	When (Timestamp)	What & How (Attack / Method)	Pre-Attack State (Baseline)	Post-Attack State (Action Executed)
admin	192.168.1.100	2026-08-27 16:02:39.340323	Brute Force Attempt (Repeated Failed Passwords)	Normal User Activity	Abnormal -> ISOLATED (IP Blocked in Firewall)

Web App Endpoint	10.0.0.88	2026-08-27 16:12:39.394418	SQL Injection (Payload on /api/v1/login)	Normal Web Request	Abnormal -> ISOLATED (IP Blocked in Firewall)

Web App Endpoint	10.0.0.88	2026-08-27 16:12:39.394418	SQL Injection (Payload on /products)	Normal Web Request	Abnormal -> ISOLATED (IP Blocked in Firewall)
Web App Endpoint	10.0.0.88	2026-09-21 14:49:59.140976	SQL Injection (Payload on /api/users/login)	Normal Web Request	Abnormal -> ISOLATED (IP Blocked in Firewall)
Web App Endpoint	10.34.253.143	2026-09-22 16:00:28.448827	SQL Injection (Payload on /live_captured_traffic)	Normal Web Request	Abnormal -> FLAGGED (Payload Dropped)

3. System Remediation & Recommendations

- **What Happened Before:** Systems operated under normal baseline activity.
- **What Happened During:** Malicious traffic violated authentication/payload constraints.
- **What Happened After:** Automated SOC playbooks executed defensive firewall rules and account locks to return system status back to **NORMAL**.
- **Recommendation:** Enforce Multi-Factor Authentication (MFA) and input sanitization on targeted endpoints.
